

# CS 301: Data Structures and Algorithms - Assignment Submission Guidelines

## Submission Format

All code must be submitted via the course GitHub Classroom link. Include a README.md describing your approach and how to run your code. Submissions without a README lose 5 points.

## Academic Integrity

You may discuss approaches with classmates, but all code you submit must be written by you. Copying code from classmates, the internet, or AI tools without attribution is a violation of the academic integrity policy and will be reported.

## Collaboration Policy

Pair programming is allowed only on assignments explicitly marked 'Group OK' on the assignment sheet. All other assignments are individual work.

## Extensions

Email the instructor at least 24 hours before the deadline to request an extension. Extensions are granted for documented medical or family emergencies, generally up to 72 hours.
