

CS 301: Data Structures and Algorithms - Course Syllabus

Course Description

This course covers fundamental data structures (arrays, linked lists, trees, graphs, hash tables) and algorithms (sorting, searching, dynamic programming, graph traversal). Students will implement and analyze these structures in Python.

Schedule

Lectures: Monday and Wednesday, 10:00-11:15 AM, Room ENG-204.

Lab section: Friday, 2:00-3:30 PM, Computer Lab 3.

Office hours: Tuesday 1-3 PM, or by appointment.

Required Materials

Textbook: 'Introduction to Algorithms' (CLRS), 4th edition. A laptop capable of running Python 3.10+ is required for labs.

Prerequisites

CS 201 (Intro to Programming) and CS 210 (Discrete Mathematics), both with a grade of C or better.
